Charles did put in an EHPM entry this pm; it had a couple errors in it, not sure if he corrected yet.

We discussed the PM data this afternoon verbally. EPA and local health did not seem to need anything in writing so we are not working on anything in that regard. Basically the average PM2.5 levels are in the unhealthy AQI range and max values the day monitoring started near fire exceeded the hazardous AQI category. I believe as a result the command expects to keep schools closed again tomorrow, counsel the schools to change out HVAC filters, and to postpone or move to another location a planned outdoor soccer tournament.

What else do you need can I help write up anything? L

I'm providing an update on today's events via your emails to Ileana, Mark and Tina covering the DC interest in our involvement and that WV may submit an ACE request. I can include that DTHHS is reviewing this PM data (below) and will enter the request into EHPM. Did they provide a response or are we still in discussions about the data?

Charles, will call you in a few to discuss.

EPA OSC on site now and would like to discuss these data with us this morning.
Lora
